Professional Summary

I am a platform engineer who takes ownership seriously. I pay close attention to details because small misses in infrastructure can turn into real production problems, and I try to be the person teams can count on when something needs to be understood, stabilized, or followed through to completion. I am comfortable handling multiple priorities at once, but I work best by separating noise from what actually matters, then focusing on the next right action.

I have spent much of my career working across engineering, support, operations, vendor, and development teams, which has taught me the importance of clear communication and practical documentation. I enjoy helping other engineers understand systems, coaching through problems, and turning messy operational knowledge into something the whole team can use. I adapt quickly when priorities change, but my goal stays the same: make the environment more reliable, easier to support, and easier for others to operate with confidence.

Technical Summary

Platform Engineering: RHEL, Debian/Ubuntu, CentOS, VMware ESXi, Kubernetes, Docker, OpenStack, Canonical Landscape, CPU/I/O process prioritization

Cloud & Infrastructure: AWS EC2, S3, IAM, VPC, Lambda, CloudFormation, Terraform, Hyper-V, KVM, OpenVZ

Monitoring & Observability: Grafana, Prometheus, Mimir, Tempo, Loki, Alloy, Zabbix, Icinga, LogicMonitor, Nagios, PagerDuty

Scripting & Automation: Bash/Shell, Python, PowerShell, Ruby, Ansible, Ansible Automation Platform/AWX, Puppet

DevOps/SecOps: JFrog Artifactory, JFrog Xray, Jenkins, Git, CrowdStrike Falcon

Databases & Messaging: PostgreSQL, MySQL/MariaDB, Redis, RabbitMQ, Couchbase

Networking & Web Services: HAProxy, NGINX, Apache HTTP Server, Apache Tomcat, OpenVPN, VPN, BIND/DNS, FreeIPA, LDAP, iptables

Methodology: Platform Engineering, Site Reliability Engineering, DevOps, CI/CD

Work History

O'Reilly Auto Parts - Springfield, Missouri (Remote) 2019 - Present

Platform Engineer II, Site Reliability Engineer, Linux Systems Engineer

Lead platform engineering efforts across large-scale Linux infrastructure supporting critical business systems

- Operated and supported 4,000+ RHEL and Debian/Ubuntu Linux systems across 3 data centers, supporting critical business services
- Reduced Linux infrastructure costs by 15% while maintaining 99.9% uptime across RHEL, Debian/Ubuntu, VMware ESXi, and Kubernetes environments
- Led Kubernetes and Docker platform rollout, improving application scalability by 25% and standardizing containerized deployment patterns

- Designed and rolled out observability strategies using Grafana, Prometheus, Loki, Tempo, Mimir, Alloy, Zabbix, and Icinga across Linux and Kubernetes environments
- Led a team of 3 engineers across Linux platform operations, automation delivery, incident response, and internal customer support

Selected Project: High Availability Artifactory Platform

- Redesigned JFrog Artifactory into a highly available architecture, eliminating single points of failure
- Implemented load balancing, failover strategy, and optimized storage design
- Improved reliability and ensured continuous availability for development pipelines
- Owned platform lifecycle, including uptime, performance, and long-term optimization

Selected Project: Enterprise Observability Platform

- Designed and deployed Loki, Grafana, Tempo, and Mimir across production environments
- Built centralized logging, metrics, and distributed tracing strategy across Linux and Kubernetes environments
- Improved incident detection and root cause analysis across systems
- Tuned queries and dashboards to reduce noise and improve performance visibility

Environment: RHEL, Debian/Ubuntu, VMware ESXi, Kubernetes, Docker, JFrog Artifactory, JFrog Xray, Canonical Landscape, CrowdStrike Falcon, Ansible Automation Platform/AWX, Jenkins, Git, Ansible, Puppet, Bash, Python, PowerShell, Grafana, Prometheus, Loki, Tempo, Mimir, Alloy, Zabbix, Icinga, PostgreSQL, MySQL, Redis, RabbitMQ, HAProxy, NGINX, Apache HTTP Server, Apache Tomcat, Keepalived, VPN, BIND/DNS, PagerDuty, JIRA, Confluence

Invoca (DialogTech) - Chicago, Illinois (Remote) Site Reliability Engineer, DevOps Engineer

2016 - 2019

Supported infrastructure reliability and automation across hybrid cloud environments

- Designed hybrid cloud infrastructure across AWS and on-prem data center environments, supporting production and staging workloads
- Built and maintained automation using Ansible, Bash, Python, and Ruby, reducing maintenance overhead by 30% across Linux infrastructure
- Administered AWS EC2, S3, IAM, VPC, Lambda, CloudFormation, and Terraform workflows supporting test and production environments
- Implemented monitoring and alerting using LogicMonitor, PagerDuty, ZenOSS, Nagios, and Cacti to improve incident detection and response
- Conducted root cause analysis for production incidents, improving response times by 25% and reducing recurring operational issues
- Supported VMware, KVM, and OpenVZ virtualization platforms used for development, staging, and production infrastructure
- Maintained MySQL/MariaDB, Couchbase, FreeIPA, and BIND/DNS services supporting application, authentication, and infrastructure operations

Environment: Linux, AWS EC2, S3, IAM, VPC, Lambda, CloudFormation, Terraform, VMware, KVM, OpenVZ, Ansible, Bash, Python, Ruby, Git, MySQL/MariaDB, Couchbase, FreeIPA, BIND/DNS, LogicMonitor, ZenOSS, Nagios, Cacti, PagerDuty, JIRA, Zendesk, Confluence, Google Sites, Dell, Cisco, Juniper

GenomOncology LLC - Cleveland, Ohio Linux Systems Engineer

2015 - 2016

Owned and operated an OpenStack-based private cloud platform enabling internal development and production workloads

- Managed and operated an OpenStack Kilo private cloud on Ubuntu 14.04, including Neutron networking and LVM-backed storage
- Designed and maintained secure remote access using OpenVPN, internal DNS, SSH, VPN, and LDAP controls
- Deployed and supported RHEL, Debian, and Ubuntu Linux systems across physical servers, OpenStack VMs, VMware Fusion, and VirtualBox environments
- Optimized Docker-based application environments supporting Genomic Workbench development and production workflows
- Established and enforced Linux security standards across SSH, VPN, LDAP, and remote access workflows
- Developed Python and Bash/Shell automation for monitoring, backups, maintenance tasks, and operational support
- Supported development teams to troubleshoot Linux, Docker, OpenStack, DNS, and CI workflow issues

Environment: Ubuntu 14.04, RHEL, Debian, OpenStack Kilo, OpenStack Neutron, LVM storage, DNS, OpenVPN, Docker, Python, Bash/Shell, SSH, VPN, LDAP, VMware Fusion, VirtualBox

Maximovich IT Consulting - Akron, Ohio

2013 - 2015

Senior Linux Administrator

Served as primary infrastructure and web hosting engineer for client environments

- Installed and maintained Debian, RHEL, and CentOS Linux systems across physical servers, VMware ESXi, and Hyper-V virtual environments
- Built and maintained multi-server LAMP hosting platforms using CentOS, Apache HTTP Server, MySQL, PHP, FTP, DNS, and iptables
- Led virtualization migration efforts from VMware ESXi to Hyper-V, including VMDK-to-VHDX workload conversions
- Served as primary technical resource for customer web hosting, backup/recovery, deployments, troubleshooting, and production support

Environment: Debian, RHEL, CentOS, Windows Server 2012, Hyper-V, VMware ESXi, VMware vSphere, Apache HTTP Server, MySQL, PHP, WordPress, Joomla, FTP, DNS, iptables, Bash/Shell, VMDK, VHDX, RAID, Dell DRAC, PERC
